## Education

### Computer Programmer

Durham College Oshawa, ON  
2017-2020

## Interests

Cricket, Soccer, Music, Travel, Reading

## Projects

---

### Real-Estate Listing - Avenest

<https://github.com/smitpatelx/avenest>

Web app build with **Vue.js**, **PHP**, PostgreSQL and **TailwindCss** for creating and managing listing data. Functionalities like user banning, approving agents, review reported content and favourites list are also added to improve over all functionalities.

### Blogging Site

[https://github.com/smitpatelx/4unnaturalistic\\_gridsome](https://github.com/smitpatelx/4unnaturalistic_gridsome)

Web app build with **Gridsome** (Vue.js Framework), TailwindCss, **Wordpress**, GraphQL and **Algolia** for creating static pages for every blog entries on wordpress backend.

### Humn Pharma - ECommerce

<https://humnpharma.com>

Humn Pharma is a well-known pharmasuitical company based in Winnipeg. I prototype, design UI, integrate **woocommerce** with stripe & paypal, configured different taxes for all canadian province. I also created a CI/CD and staging environment for both Canadian & US website for them. I also added localization for french, spanish & english. I also did **SEO** for them. I optimized their site to best level possible (Ask for before & after pic if you want) by optimizing all the media files and serve them from Cloudflare's global network. Lastly we faced the problem of searching users by their company names, so I wrote a custom **plugin** based on **Vue.js**, Here is the

**Code:** <https://github.com/smitpatelx/robust-user-search/>

**Plugin:** <https://wordpress.org/plugins/robust-user-search/>

### Employee Onboarding Site

<https://github.com/smitpatelx/employee-onboarding-form>

This application is created using **Laravel** as a backend & **Vue.js** for the front-end. The application was developed for maximum performance & security. This app implements functionalities like, data-validation, user management, role-management, two-factor auth, email verification & much more. This is an open-source site for posting jobs and collecting employee information related to payment & work-authorization.

### Signature Generator

<https://e-signature.smitpatelx.com/>

[https://github.com/smitpatelx/signature\\_gen](https://github.com/smitpatelx/signature_gen)

This is an e-mail signature generator web app. Created to solve real world problem. This application was created using **Nuxt.js** & Tailwind-Css. Application is based on **JAM Stack** & currently deployed on netlify for continuous integration & deployment. Works for both HTML & Simple Copy.

### Real-Time Chat Application

[https://github.com/smitpatelx/socket\\_chat](https://github.com/smitpatelx/socket_chat)

This is a web app for private chat-room. Application was designed using **Vue.js** & **Socket.io** with **nodejs** as a backend. Some of the features that I implemented was - chat-room join notification, auto-scroll to bottom, new chat animation, user exit notification, reusable vue.js components
